Adam James & David Russell work on the electronics

THE University of Hertfordshire Formula Student team are nearing the end of their build. They have supplied the WHT with pictures showing their progress in the electronics department.

The electronics for the car is very complex, as it is a pure electric vehicle, so the detail and time spent on the electronics became quite a task for the students.

Darren Wells said:

'It is imperative that all of the batteries are connected to the motors and that the driver has control over the speed that the motors run at, which is the high voltage system on the car.

In addition to this there is a separate electrical system (low voltage), which controls things like cooling fans and LED's on the dashboard.

All these different parts as a result, made the electronics process quite a challenge, but an enjoyable one.
